**Fridge**: aka Freshie? Freshy? Freshly? HeyFridge?

**Problem**: college students and young adults struggle with best practices when it comes to grocery shopping responsibly and storing food correctly, resulting in X lbs. of food waste. Furthermore, incorrect food storage and lack of awareness can lead to undesirable food safety outcomes.

**Solution**: creating a web app that helps students keep what's in their fridge in mind in their day2day, reducing food waste, while providing incentives to compete against their friends and shop locally

**Category**: edtech, sustainability, food waste, food safety

**Goals**:

- **!!! -**
  - **Food spoilage tracker**
    - Receipt scan input method - scan receipt
    - Food expiry lookup - lookup SKUs from receipt in known databases, producing estimates for how long food should last
    - Food storage recommendations for "unknown / unlearned" foods
      - Anki/Duolingo expertise type-beat
  - **Food reminder system**
    - UI: swipe left/right if the food is still in your fridge / unfinished
      - ~~Q: how often do we ping? how do we not annoy the user while not missing out on expiration?~~
        - ping ~1 week, 3 days, 1 day before expiration? Rely on push for time-sensitive
        - only add a "swipe card" upon expiry (this is the only event that matters since we're tracking food waste), yes = used, no = unused, expired
        - todo list style for using up ingredients before expiration date for our feedback system pre-expiration/swipe card to reduce overloading user with prompts
    - Provide general hints for what fresh food should look/smell/taste/feel like
  - Food waste measurement system
    - Track when foods are/aren't used completely
      - Create
      - ~~*Q: How do we do this in a nice UX way → Q1*~~
  - **Clean UI / demo-ready**
- !! -
  - Community tab (Beli type-beat) - leaderboard for food waste and cooking food responsibly
    - Game-ify tracking: streaks, $ wasted on food, lbs. of food wasted, etc.
  - Grocery List - write what you want to buy next

        - Personalized shopping recommendations (i.e. *last time you bought too much X, buy less to prevent waste!*)
    - Location-based recommendation system: ping you when you're eating out (*you have X food left!*) & at the grocery store (*what would go well that's left in your fridge)*
    - Takeout leftovers - management system
- ! -
    - External connections - grocery stores & farmers markets
        - Guided recommendation system based on subscription service
    - External connections - recipe recommendation system
        - MISE, recipe databases, etc.
        - Recommend recipes based on expiring items recency
    - Speech accessibility - TTS/STT
    - **Wrapped Waste**

**Needs**:

- Frontend: react, vercel, next.js,
- Backend:
- DB: convex
